Conv 2D Operation

Only Kernels

Kernel Size

no. of filters

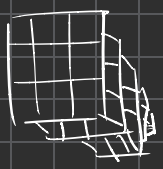

- No. of Trainable Parameters

$$= ((((3 \times 3) \times 3) + 1) \times 32) = 896$$

(Conv 2D Kernel; no. of Bias; previous Layers input channels no.; no. of filters in current layer)

Conv 2D Operation

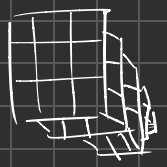

Only Kernels

no. of filters

Kernel Size

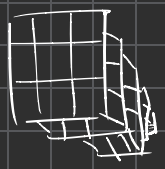

no. of filters

$$= ((((3 \times 3) \times 32) + 1) \times 64) = 18{,}464$$

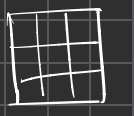

(Conv 2D Kernel; no. of Bias; previous Layers input channels no.; no. of filters in current layer)

Conv 2D Operation

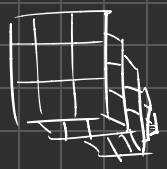

Only Kernels

no. of filters

Kernel Size

no. of filters

$$= ((((3 \times 3) \times 64) + 1) \times 128) = 73{,}856$$

(Conv 2D Kernel; no. of Bias; previous Layers input channels no.; no. of filters in current layer)
